

General notes

Calculation of normalized correlation:

$$g_{12}^{(2)}(\Delta\lambda) = \frac{\int S_1(\lambda - \Delta\lambda) S_2(\lambda) d\lambda}{\sqrt{\int S_1(\lambda - \Delta\lambda) S_1(\lambda) d\lambda} \cdot \sqrt{\int S_2(\lambda - \Delta\lambda) S_2(\lambda) d\lambda}}$$
